If you need sound absorption for when the children splash in the bathtub while loudly singing their favorite song - or do you want warmth and coziness, or simply to continue the common thread to the bathroom, then this is possible with the UNIKA series from FibroTech.

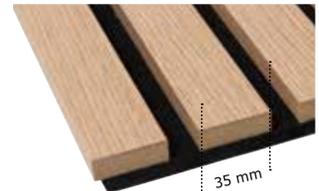

Foiled MDF

Acoustic panels in the UNIKA serie consist of a 9 mm back plate in recycled polyester and slats of foil-wrapped MDF. This foiled surface allows for regular wiping and cleaning without damaging the finish. This type of acoustic panels is particularly suitable for all rooms with a relative humidity below 55%, e.g., bathrooms, kitchens, counters and headboards, where the need for cleaning and wiping is larger - though not in direct contact with water. When setting up UNIKA Acoustic Panels, the ends must be sealed with a clear lacquer.
